H-1B transfer only. Approved I-140, no lottery required.

SUMMARY

Technical enablement professional with 8+ years in IoT, embedded systems, and wireless communication. Bridges engineering, product, and business teams to turn ambiguous problems into practical technical workflows. Hands-on with agentic AI, LLM applications, prompt engineering, AI coding agents, machine learning, edge-to-cloud data pipelines, and technical adoption. Experienced translating complex systems for engineers, stakeholders, and executives, from architecture and implementation through testing, documentation, and rollout.

EXPERIENCE

Software/Electrical Engineer , Ivani LLC, Greater St. Louis Area Jan 2018 – Present

Engineering

- Bridge between hardware, embedded software, and data engineering teams for wireless communication and networking systems.
- Turned ordinary IoT devices into occupancy sensors: cloud service interfaces, third-party hardware functional testing, and the firmware update deployments that changed what the product could do.
- Built and shipped algorithms combining applied math and machine learning in embedded C and Python (pandas, NumPy, SciPy, Matplotlib). Configured wireless devices for Network Presence Sensing.
- Built the IoT data pipeline end to end: collection, cleaning, ingestion from edge to cloud, plus the Python analysis scripts on top of it.
- Designed and ran the onboarding program for new engineers: architecture deep dives, tooling, algorithmic approaches.

Zero-Gravity Thinker | Technical Strategy & Collaboration

- Embed with teams as an outside perspective, challenging assumptions and surfacing overlooked questions before they become downstream problems.
- Run rubber-ducking and brainstorming sessions with engineers; translate their honest feedback upward in a form the company can act on.
- Sketch requirements at helicopter-view level before engineers dive into detail. Bridge between stakeholders and engineering: early updates, hesitant questions surfaced in standups, misunderstandings cleared before they become friction.
- Built the communication scaffolding: plans-of-action on Slack, findings recorded in public channels, worklogs and block diagrams kept followable.
- Testing and docs support: implemented tests and MRQs, ran internal/external documentation end to end as a fresh user, tested UIs and apps from the user's seat.

Social Media Marketing Co-Lead

- Co-lead the marketing team: competitor analysis, team routines and processes, and the full content pipeline from conception to posting across multiple platforms.
- Monitor reach, engagement, and conversions to drive strategy; monthly stakeholder audits to keep messaging aligned with company direction.
- Built 7 interactive Sensify product demos in 3 weeks using AI coding agents, structured specifications, and a 19-check Playwright audit; presented to C-suite and iterated based on executive feedback.

Co-Founder, CEO , Embark Women, Tyler, TX Jan 2017 – Apr 2022

- Built and led a grassroots organization supporting young women entrepreneurs and students: 20+ events across webinars, hands-on workshops, and live networking meetups, serving 500+ participants.
- Recruited and supported 150+ members with personalized career and business guidance. Drove program strategy through community feedback loops: surveys, 1:1 follow-ups, engagement tracking.

- Secured sponsorships with metrics-backed proposals across student groups, universities, and businesses. Produced interviews and event spotlights to communicate the community's value.
- Owned end-to-end delivery: branded decks, marketing assets, WordPress/Wix websites, and analytics dashboards with HubSpot, Google Analytics, and Facebook tools.

Electrical Engineer , Trane, Tyler, TX Jun 2017 – Jan 2018

- Wrote a multi-threaded Ruby tool that flashed firmware on 400+ microcontroller boards remotely and simultaneously, cutting deployment time and customer downtime.
- Debugged and fixed software issues in VSPD drives (C/C++). Wrote failure scenarios and tested updates against them before they hit customer environments, because finding it in the lab beats finding it in the field.
- Designed and built embedded electrical systems supporting multiple microcontroller boards. Troubleshoot with Eclipse Cpp Neon, ST-Link Programmer, and Linux IDE. Hands-on soldering and onsite debugging alongside field teams.

SELECTED AI PROJECTS

- **Memory-Augmented AI Agent • Global AI Hackathon:** Production memory layer for LLMs: FastAPI, PostgreSQL/pgvector, Redis, LLM-arbitrated conflict resolution with weighted dedup and importance-ranked recall. Deployed to cloud, shipped solo in one week.
- **TeamTrail • Slack Agent Builder Challenge:** Native Slack AI App using the Assistant lifecycle, Slack Real-Time Search API, and a Notion MCP integration for cited cross-tool answers. Built and submitted solo.
- **Dead Code Finder • GitLab Transcend Hackathon:** Custom GitLab Duo agent flow querying the Orbit knowledge graph for unused code, results bucketed by confidence. Built and submitted solo.

EDUCATION

M.S., Electrical Engineering, University of Texas at Tyler (2015 – 2016)

New Graduate Fellowship • Graduate Fellowship Renewal • Enactus Fellow (BNY Mellon) • Tech for Tyler Hackathon, IP Challenge 2nd Place

B.E., Electronics & Communications Engineering, Alpha College of Engineering (2010 – 2013)

AI & TECHNICAL ACTIVITIES

7 hackathons, 4 Devpost projects • 2 GitHub issues filed against Google ADK (1 co-authorship invitation)

CERTIFICATIONS & LANGUAGES

Google AI Essentials • Google Prompting Essentials • Introduction to Generative AI Learning Path
English (Full Professional) • Tamil (Native or Bilingual)
